

The D.H. Twin Otter

Kit Features:

- The twin otter was designed to simplify the complicated job of engine, fuel tank, throttle installation.
- Each engine mount (nacelle) comes fully assembled and slides into a pre-cut slot through leading edge of wing. Upper nacelle comes prejoined to mount and form fairing to wing.
- Engine and flap control torque rods are installed in wing. Nyrods are also in place for ailerons.
- After all necessary hardware installed in wing core, the wing is covered with balsa, leading & trailing edge, and wing tips are in place and sanded.
- Hinge lines for flaps and ailerons pre-cut.
- All tail surfaces are fully shaped and ready for covering or painting. Hinge lines are also cut on all tail surfaces.
- Completely pre-built polyfite fuselage with bulk head for nose gear and main leading gear are in place.
- Complete hardware pack included.
